# WATERCOURSE CROSSING SERVICES

Construction over or through a water body, including bridges and culverts, requires special attention to protect sensitive aquatic ecosystems.

Your project may need to ensure compliance under a variety of regulations, including the *Water Act*, *Fisheries Act*, *Migratory Birds Convention Act*, and any relevant Codes of Practice. Construction activities may also require the services of a Qualified Aquatic Environmental Specialist (QAES) or a CPESC (Certified

Professional in Erosion and Sediment Control). CPP Environmental is here to help you bridge the gap!

CPP Environmental has assisted companies with stream diversion, in-stream works, and other construction projects across Alberta. With our in-depth knowledge of regulatory proceedings and strong professional relationships with regulators, your applications are completed correctly and efficiently, compliance issues are dealt with, and you get your approvals faster.
